### SPEAKERS

The new Airtech ATS01 hybrid speakers are made using a perfect match of magnetoplanar and dynamic technologies.

The choice of neodymium as magnetic elements combined with the precision applied for the laying and the draft of the mylar are fundamental for the success in efficiency and dynamism of the speaker itself.

Each weld, component and connection has been conceived and designed respecting all the experience gained with Airtech using the best materials available on the market such as connection cables and proprietary solder made under Airtech specifications. The frame represents years of research on the dynamic decoupling system, giving an exciting sonic light/dark response. Technically, the entire frame is machined from solid aluminum while the screws use 100% stainless steel of nautical origin.

Finally we decided to combine a 165mm driver to have a deep but at the same time fast bass, without neglecting the phase problems that on average afflict hybrid speakers.

All these solutions make the new Airtech ATS01 speakers unique in the world and a true reference for technology and performance, both as regards the niche of hybrid speakers, but also when it comes to the world of high-end speakers in general.

ATS01 Speakers are available in standard finish (natural and black brushed aluminium) or colour version with fully customizable colours of aluminium parts and panel's fabric.

Technical specifications:

Impedance 4ohm

Sensibility 87 db (1W/1m)

Bandwidth 35hz/25Khz

Woofer crossover frequency 250hz

Power handling over 250 watts rms

Minimum recommended power 100/150 watts

**PROUDLY DESIGNED AND  
MANUFACTURED IN ITALY  
BY AF GROUP SRL**
